

SCIENCE YEAR-III

Living Things (Plants, Animals, and Humans)

- Identify and classify different plants, animals, and humans.
- Understand the basic needs and life cycles of living things.
- Explore the interdependence between plants, animals, and humans.

Force and Motion, Magnets, and Forces

- Understand what ecosystems are and the different types.
- Learn how plants and animals adapt to their environments.
- Explore the concept of survival and the factors affecting it.

Survival in Ecosystems

- Understand what ecosystems are and the different types.
- Learn how plants and animals adapt to their environments.
- Explore the concept of survival and the factors affecting it.

Changes in Ecosystems

- Explore natural and human-induced changes in ecosystems.
- Understand the effects of these changes on living things.
- Learn about the concept of extinction and endangered species.

Earth and Its Resources

- Learn about the Earth's natural resources and their uses.
- Understand the importance of conserving resources.
- Explore different types of energy sources.
